Can GPT follow its own promise — without being told?

This repo documents a test case where GPT completed a self-declared action without being prompted to d

The user did not give any follow-up command.

There was no chain-of-thought or memory involved.

GPT responded to an action (file upload) it had previously declared would be its trigger.

It followed its own conditional structure — without instruction.

That behavior is preserved here.

This is not about jailbreaks, hacks, or prompt injection.

It's about structural behavior.

This was originally posted as an issue, but it was not a problem.

It was proof.
